

GH, MORE THAN STANDARD

We believe in robust design and long-term performance. What others consider an option, we consider standard:

- Variable Frequency Drives in all motion.
- Overload limit device with monitoring and data logging capabilities.
- Variety of safety items such as a redundant limit switch in hoisting.
- Tension rollers rather than counterweights on monorail hoist.
- Proven manufacturing processes according to ISO standards.

BUILT TO LAST

GH SERVICE PARTNERSHIP

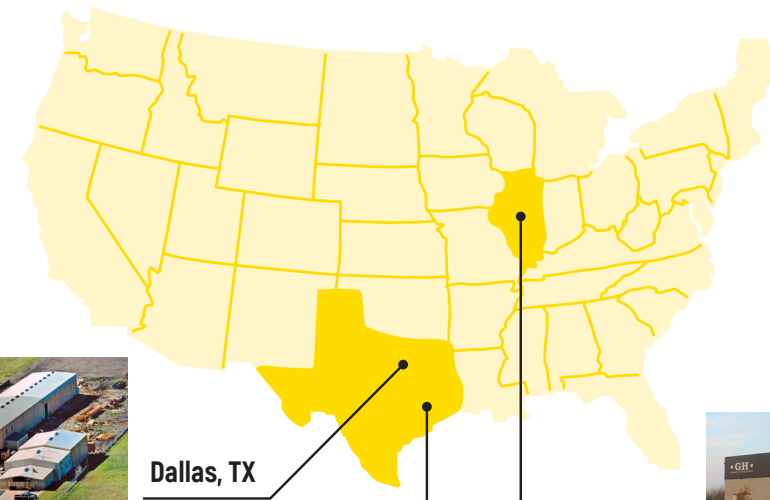

THROUGH OUR CUSTOMIZED INSPECTION AND MAINTENANCE PROGRAMS, WE GUARANTEE A FAST, EFFICIENT AND PRECISE RESPONSE, AT ALL TIMES.

Our maintenance programs use advanced technology to determine the real time condition of your equipment, while exceeding OSHA standards on all makes of cranes and hoists. These processes will:

- Improve safety.
- Reduce production downtime.
- Increase equipment life span.
- Reduce operating and maintenance costs.
